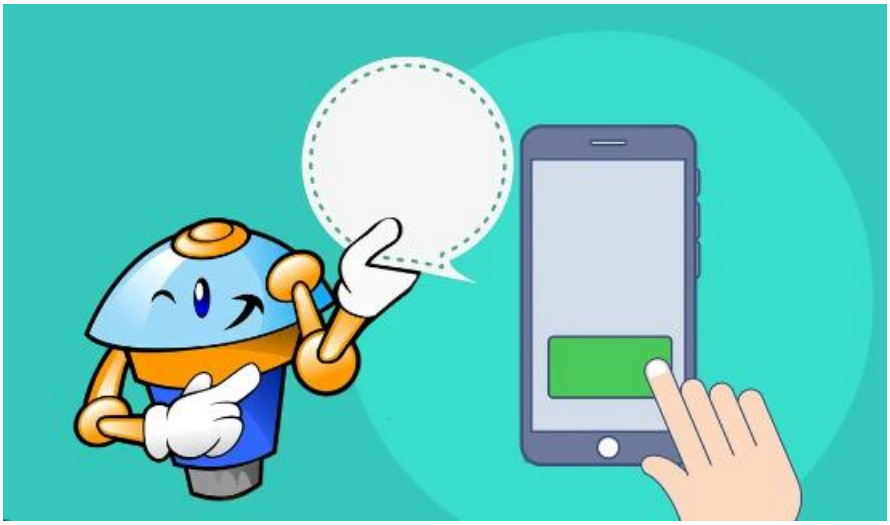
CREATE A CHATBOT IN PYTHON

Phase-1 Documentation Submission

Register Number : 963521104033

Name : Kingshiya K S

Project title : Chatbot in python



CREATE A CHATBOT IN PYTHON

Objective:

The objective is to create a chatbot in Python that provides exceptional customer service, answering user queries on a website or application and deliver high-quality support to users, ensuring a positive user experience and customer satisfaction.

Abstract:

Creating a Chatbot Using Python: A Modular Approach : In this abstract, we present a modular framework for building chatbots using Python. Chatbots have gained immense popularity in various domains, from customer service to entertainment. Our approach emphasizes modularity, making it easier to develop, customize, and maintain chatbot applications.

High-level abstract for creating a chatbot using Python:

Choose a Python chatbot library : There are a number of different Python libraries available for developing chatbots, such as ChatterBot, NLTK, spaCy, and TensorFlow. Choose a library that is appropriate for your needs and skill level.

Design your chatbot : Think about what features you want your chatbot to have, and how you want it to interact with users. You may want to sketch out a flowchart or wireframe to help you design your chatbot's conversational flow.

Develop your chatbot : Use the Python chatbot library that you chose to implement your chatbot's conversational logic. This may involve developing a training corpus of conversations, training a machine learning model, and writing code to handle various user inputs.

Deploy your chatbot : Once your chatbot is developed, you need to deploy it so that users can interact with it. There are a number of different ways to deploy a chatbot, such as deploying it over the web, deploying it as a mobile app, or integrating it with a messaging platform.

Natural Language Processing (NLP) : This module focuses on text analysis and understanding. We leverage NLP libraries like NLTK, spaCy, or Transformers to preprocess and interpret user input.

Intent Recognition : Intent recognition is crucial for determining what the user wants. We employ machine learning techniques, such as supervised learning or pre-trained models, to classify user intents.

Dialogue Management : Managing conversations efficiently is key. We design a stateful dialogue management system that tracks conversation context, enabling the chatbot to respond contextually.

Response Generation : This module generates responses based on recognized intents and dialogue context. Techniques like rule-based systems, templates, or generative models (GPT-3, GPT-4) can be used.

Integration : Chatbots need to be integrated with various platforms. We provide integration options for websites, messaging apps, and voice assistants.

Customization and Training : Customization is essential to align the chatbot with specific use cases. We discuss techniques for fine-tuning models and gathering user feedback for iterative improvement.

Deployment : We explore deployment options, including cloud hosting, containerization, and serverless architectures, to make the chatbot accessible to users.

Analytics and Monitoring : Continuous monitoring and analytics ensure the chatbot's performance and user satisfaction. We discuss tools and practices for tracking key metrics.

Security and Privacy : Security and privacy are paramount. We cover best practices for securing user data and protecting against malicious inputs.

Overview of some of the key Python modules for creating a chatbot:

ChatterBot: This library provides a simple and flexible framework for building chat-based applications using natural language processing (NLP) techniques. It allows developers to create chatbots that can engage in conversations, understand user inputs, and generate appropriate responses.

NLTK: The Natural Language Toolkit (NLTK) is a Python library that provides a variety of tools for NLP tasks, such as tokenization, stemming, lemmatization, and parsing. It can be used to develop chatbots that can understand and process natural language text.

spaCy: This library is another popular Python library for NLP. It provides a variety of features, such as tokenization, tagging, parsing, and named entity recognition. It can be used to develop chatbots that can understand and process natural language text in a more sophisticated way than NLTK.

TensorFlow: TensorFlow is a machine learning library that can be used to develop chatbots that can learn from data and improve their responses over time. It can be used to train chatbots on large datasets of conversations, so that they can generate more accurate and relevant responses to user inputs.

In addition to these modules, there are a number of other Python libraries and frameworks that can be used to develop chatbots. For example, the Flask and Django web frameworks can be used to create chatbots that can be deployed over the web. Creating a chatbot using

Python can be a challenging but rewarding experience. By following the steps above, you can develop a chatbot that can interact with users in a meaningful way. Our modular approach enables developers to mix and match components based on project requirements. We illustrate these modules with code examples and real-world applications, demonstrating how Python's versatility and rich ecosystem can be harnessed to create effective and intelligent chatbot solutions.

PYTHON PROGRAM:

Import Libraries

In [1]:

```
import tensorflow as tf
import numpy as np
import pandas as pd
import matplotlib.pyplot as plt
import seaborn as sns
from tensorflow.keras.layers import TextVectorization
import re,string
from tensorflow.keras.layers import LSTM,Dense,Embedding,Dropout,LayerNorma
lization
```

In [2]:

```
df=pd.read_csv('/kaggle/input/simple-dialogs-for-chatbot/dialogs.txt',sep='
\t',names=['question','answer'])
print(f'Dataframe size: {len(df)}')
df.head()
Dataframe size: 3725
```

Out[2]:

OUTPUT :

	Question	answer
0	hi, how are you doing?	i'm fine. how about yourself?
1	i'm fine. how about yourself?	i'm pretty good. thanks for asking.
2	i'm pretty good. thanks for asking.	no problem. so how have you been?

	Question	answer
3	no problem. so how have you been?	i've been great. what about you?
4	i've been great. what about you?	i've been good. i'm in school right now.

Data Preprocessing

Data Visualization

In [3]:

```
df['question tokens']=df['question'].apply(lambda x:len(x.split()))
df['answer tokens']=df['answer'].apply(lambda x:len(x.split()))

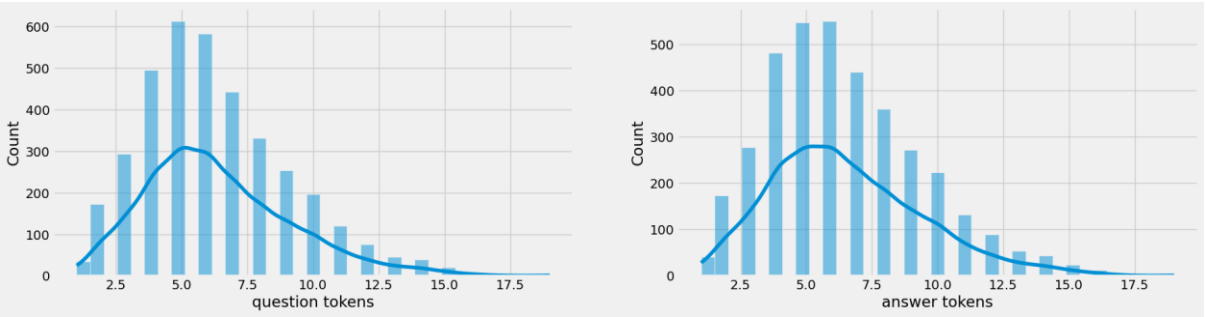
plt.style.use('fivethirtyeight')
fig,ax=plt.subplots(nrows=1,ncols=2,figsize=(20,5))

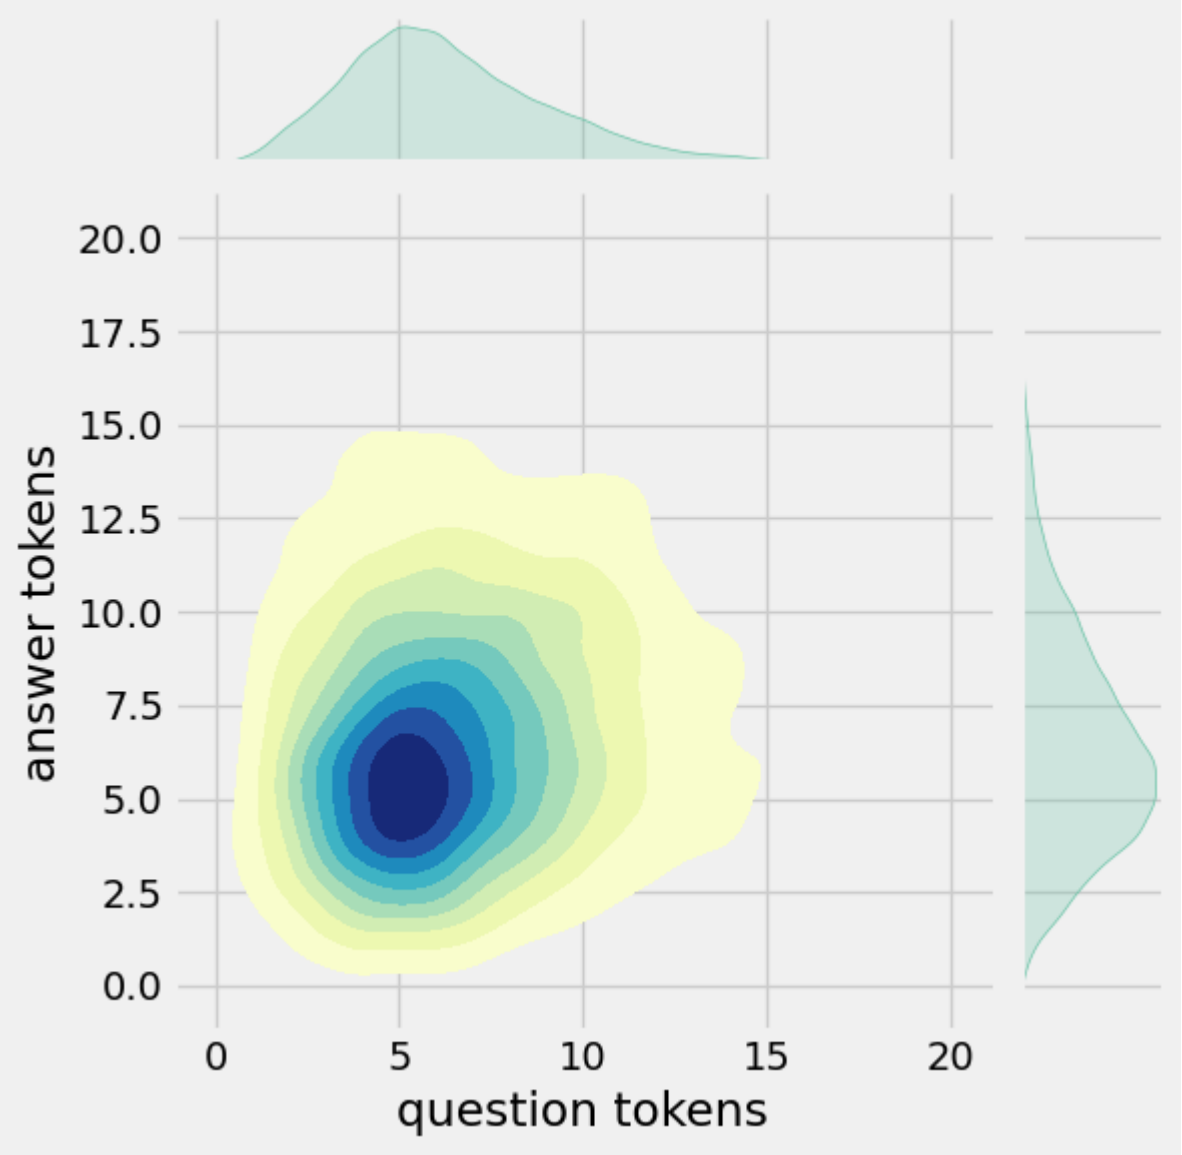
sns.set_palette('Set2')
sns.histplot(x=df['question tokens'],data=df,kde=True,ax=ax[0])

sns.histplot(x=df['answer tokens'],data=df,kde=True,ax=ax[1])

sns.jointplot(x='question tokens',y='answer tokens',data=df,kind='kde',fill
=True,cmap='YlGnBu')

plt.show()
```





Text Cleaning

In [4]:

```
def clean_text(text):
    text=re.sub('-',' ',text.lower())
    text=re.sub('[.]',' . ',text)
    text=re.sub('[1]',' 1 ',text)
    text=re.sub('[2]',' 2 ',text)
    text=re.sub('[3]',' 3 ',text)
    text=re.sub('[4]',' 4 ',text)
    text=re.sub('[5]',' 5 ',text)
    text=re.sub('[6]',' 6 ',text)
    text=re.sub('[7]',' 7 ',text)
    text=re.sub('[8]',' 8 ',text)
    text=re.sub('[9]',' 9 ',text)
    text=re.sub('[0]',' 0 ',text)
    text=re.sub('[,]',' , ',text)
    text=re.sub('[?]',' ? ',text)
```

```
    text=re.sub('[!]',' ! ',text)
    text=re.sub('[$]',' $ ',text)
    text=re.sub('[&]',' & ',text)
    text=re.sub('[/]',' / ',text)
    text=re.sub('[:]',' : ',text)
    text=re.sub('[;]',' ; ',text)
    text=re.sub('[*]',' * ',text)
    text=re.sub('[\']',' \' ',text)
    text=re.sub('[\"]',' \" ',text)
    text=re.sub('\t',' ',text)
    return text

df.drop(columns=['answer tokens','question tokens'],axis=1,inplace=True)
df['encoder_inputs']=df['question'].apply(clean_text)

    '''I like this restaurant because they give you free bread.'''
])
```

```
You: hi
Bot: i have to go to the bathroom.
========================
You: do yo know me?
Bot: yes, it's too close to the other.
========================
You: what is your name?
Bot: i have to walk the house.
========================
You: you are bot?
Bot: no, i have. all my life.
========================
You: hi, how are you doing?
Bot: i'm going to be a teacher.
========================
You: i'm pretty good. thanks for asking.
Bot: no problem. i'll have to give you the english assignments from my
mind.
========================
You: Don't ever be in a hurry
Bot: it's not a great.
========================
You: I'm gonna put some dirt in your eye
Bot: that's a good idea.
```

```
========================
You: You're trash
Bot: the tv news is reporting a bank robbery.
========================
You: I've read all your research on nano-technology
Bot: it's the weather. i've gone around the world.
========================
You: You want forgiveness? Get religion
Bot: no, i'll be my.
========================
You: While you're using the bathroom, i'll order some food.
Bot: don't order for me. i've been a cheater.
========================
You: Wow! that's terrible.
Bot: never park your car under the house.
========================
You: We'll be here forever.
Bot: we'll be there in half an hour.
========================
You: I need something that's reliable.
Bot: you need a car with low mileage.
========================
You: A speeding car ran a red light, killing the girl.
Bot: what happened?
========================
You: Tomorrow we'll have rice and fish for lunch.
Bot: i'll make a sandwich.
========================
You: I like this restaurant because they give you free bread.
Bot: well, i think that's a good idea.
```

NEXT STEPS :

In Phase 2 of the project, we will proceed with the following tasks:
Implementing data wrangling techniques and using neural networks to procced the project i n a advanced way.

CONCLUSION:

In phase 1, we have created a chatbot in Python that provides exceptional customer service, answering user queries on a website or application and deliver high-quality support to users, ensuring a positive user experience and customer satisfaction. This sets the stage for our project's successful execution in subsequent phases.
